

CORRECTIONS

Dokainish H, Pillai M, Murphy SA, DiBattiste PM, Schweiger MJ, Lotfi A, Morrow DA, Cannon CP, Braunwald E, Lakkis N, for the TACTICS-TIMI-18 Investigators. Prognostic Implication of Elevated Troponin in Patients With Suspected Acute Coronary Syndrome But No Critical Epicardial Coronary Disease: A TACTICS-TIMI-18 Substudy. *J Am Coll Cardiol* 2005;45:19–24.

There was an error in the p value in Figure 1. The corrected figure and legend are printed below.

Figure 1. Kaplan-Meier curves for death/myocardial infarction (MI) at 180 days by coronary artery disease (CAD) and troponin I status ($p = 0.012$). Groups: 1 = troponin-negative/CAD-negative; 2 = troponin-negative/CAD; 3 = troponin-positive/CAD-negative; 4 = troponin-positive/CAD.
